Introduction

Welcome to Timeless, where cutting edge watch technology meets seamless . Explore our range of watches designed to meet your every needs. Our project introduce the website called Timeless in which we sell high demand watches in affordable costs. We are one of the group of wholesalers.

Any individual can visit our website.

This is the first and only coursework in the Information System module, accounting for 60% of our overall module weighting. We mainly used HTML, Css and javascript to complete this project. This design makes the code easier to maintain and allows for future additions and modifications to the system. This assignment has helped me enhance my programming skills and get real experience in website development, especially using the markup language. HTML, or HyperText Markup Language, is the standard markup language used to describe the structure of web-based content.

HTML is made up of a sequence of elements and attributes that are used to mark up all of the components of a document so that it may be structured meaningfully. Html is used to create the structure and content of the website, while CSS is used to add styling and layout to the website.

Aims and Objectives Aims:

1. Our main aim is to receive Customer feedback which help us in improvement .
2. Adaptation to market trends.
3. Partnership and collaboration.
4. Improve HTML application development abilities.
5. Encourage best practices in website development.
6. Familiarize yourself with markup development techniques. This involves understanding how to properly design, execute, and document software projects.

Objectives:

1. To introduce new watch models.
2. To promote eco-friendly features.
3. Created capabilities to manage inner part of website.

How CSS, HTML, JS was used while making a website.

Creating a website typically involves the use of HTML (Hypertext Markup Language), CSS (Cascading Style Sheets), and JavaScript (JS). We use all three of these in our project.

1. HTML (Hypertext Markup Languages)

HTML is the skeleton of any webpage and is used for creating and structuring the content of a Webpage. Basic Signal And Slot Example; HTML stands for Once Hyper Text markup language. It is primarily satellite language form barrier objects and objects. HTML is the universal language globally widely used to establish backbone of a web site. HTML, which stands for Hypertext Markup Language, is a web language that defines the structure of web pages.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>printer</title>
  <link rel="stylesheet" type="text/css" href="style.css">
```

Figure 1: Using HTML

2. CSS: (Cascading Style Sheets)

CSS is a tool that allows you to format HTML elements and can control how web pages look visually. Besides, properties such as colors, typography, spaces, layout, and others fell within it. Enable the use of CSS to make web pages present well on mobile devices (responsive design). CSS (Cascading Style Sheet) is a simple mechanism for adding style (e.g. fonts, colors, spacing) to Web documents. CSS is the language for describing the presentation of Web pages, including colors, layout, and fonts.

```
7 header::before {
8     content: "";
9     position: absolute;
10    top: 0;
11    left: 0;
12    width: 100%;
13    height: 100%;
14    background: rgba(0, 0, 0, 0);
15    z-index: 1;
16 }
17
18 /* Global Styles */
19 body {
20     font-family: 'Inter', sans-serif;
21     margin: 0;
22     padding: 0;
23     color: #1a1423;
24     width: 100%;
25 }
26
27 a {
```

Figure 2: Using CSS

3. JS (JavaScript):

JavaScript is a computer language used for web development turn web pages into more than just static pages digital environment so that every time the page does more than just sit still and displays new information for you to look at, displaying timely content updates, interactive content maps, animated 2D/3D graphic, automatic slideshow, etc. It is not the same as Java, the programming language.

Dynamic typing, dynamic binding, or dynamic type creation, among other speed-ups, parameter lists, object-orientation, variable scope, data type, syntax, third-party support, and more, is Java. The main reason to use JavaScript is to run JavaScript. With the above functionalities, functions can be designed and attached to the objects.

```
document.addEventListener('DOMContentLoaded', function() {
  const form = document.querySelector('form');
  form.addEventListener('submit', function(event) {
    event.preventDefault();

    const firstName = document.querySelector('#first-name').value;
    const lastName = document.querySelector('#last-name').value;
    const gender = document.querySelector('#gender').value;
    const message = document.querySelector('#message').value;
    const errorMessage = document.querySelector('#error-message');

    if (firstName === '' || lastName === '' || gender === '' || message === '') {
      errorMessage.textContent = 'All fields are required.';
      return;
    }

    // If validation passes, redirect to about.html
    window.location.href = 'about.html';
  });
});
```

Figure 3: Using javascript

Tools used during this assignments

1. Visual Studio Code:

Visual Studio (VS) Code is a super helpful open-source code editor that can help you fix errors in cloud and web applications. It was created by Microsoft and you can use it on macOS, Linux, and Windows. The best part is, Visual Studio Code is totally free, lightweight, and it's packed with features. You can use it on your desktop or even on the web, and it's available for Windows.

2. Balsamiq:

Balsamiq is a quick wireframing tool. It generates mockups and wireframes for websites, online applications, and desktop software. It lets you visualize ideas and concepts using a simple drag-and-drop interface. The wireframes made with Balsamiq are hand-drawn. It prioritizes the product's structure and substance over its visual aspects.

Home page

Home page is an introductory page of the website which is typically serving page as table of contents for the particular site. Home consists of navigation bar where product, blog, about us and research is mentioned in it and home has certain words written in the middle of the homepage where it describes about your certain homepage details.

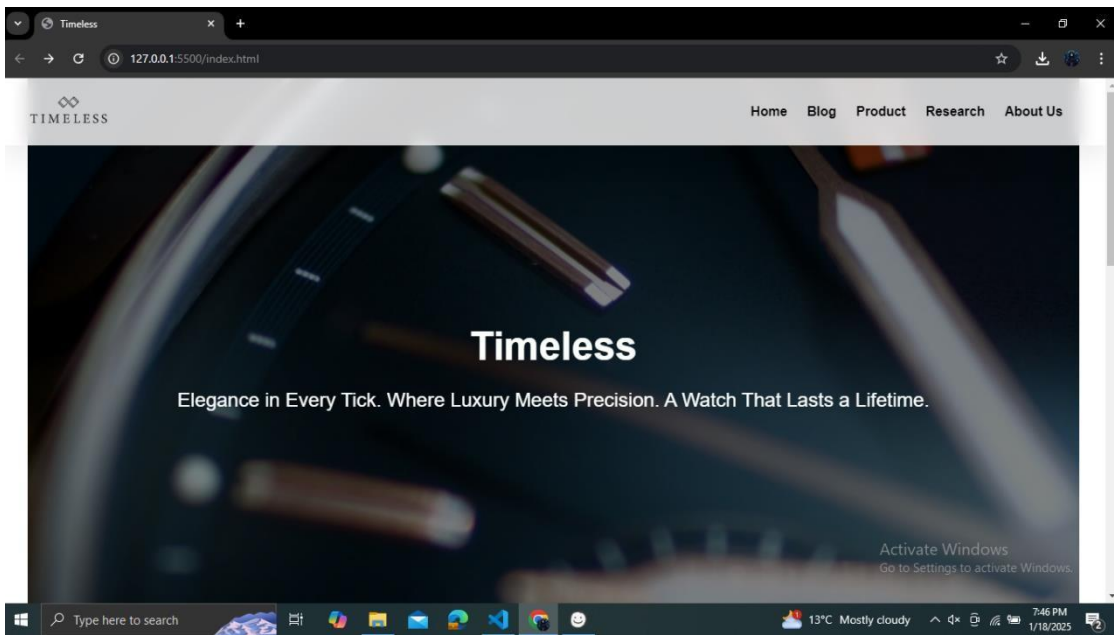

Figure 4: Home page

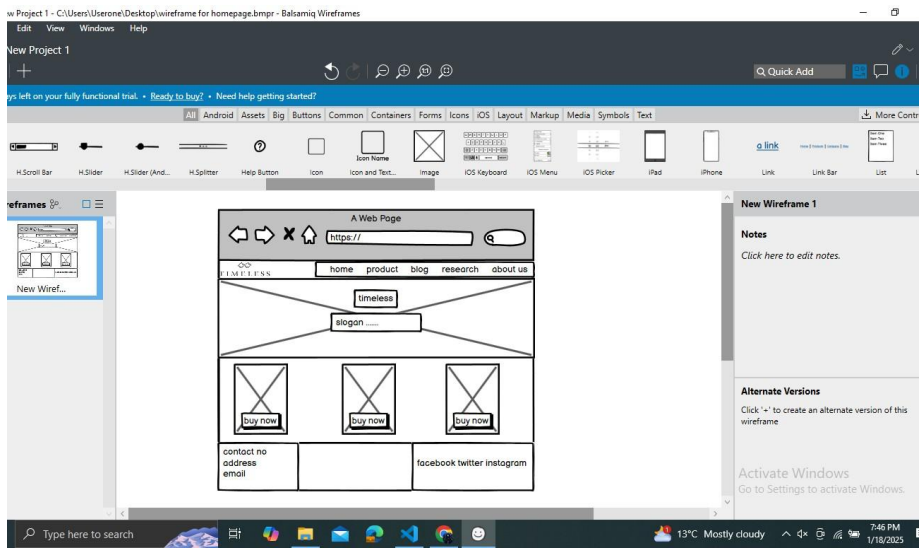

Figure 5: Wireframe of homepage

Product page

It is a website that allows prospective purchasers to learn about a product's characteristics, benefits, and pricing. Product pages are also where site visitors may make purchases. Basic product pages have interactive components that let buyers to select product options such as size and color before adding them to their basket.

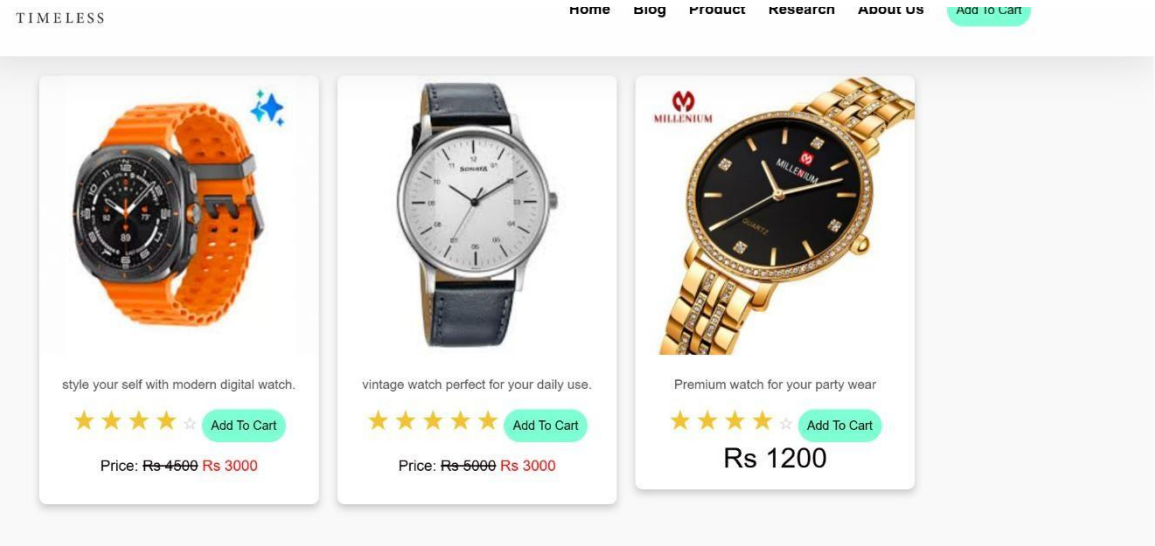

Figure 6: Product page

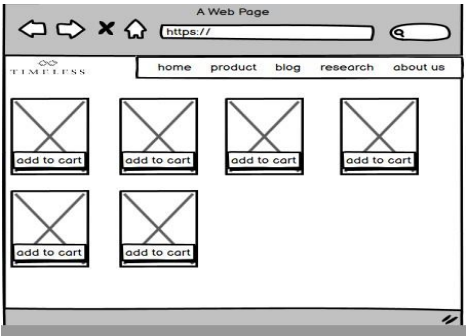

Figure 7: Wireframe of product page

Blog page

Blogging is the process of creating and publishing articles, photos, and other content to a website. It has a comfortable atmosphere, regular updates, lifehacks, instruction, and a high level of user engagement.

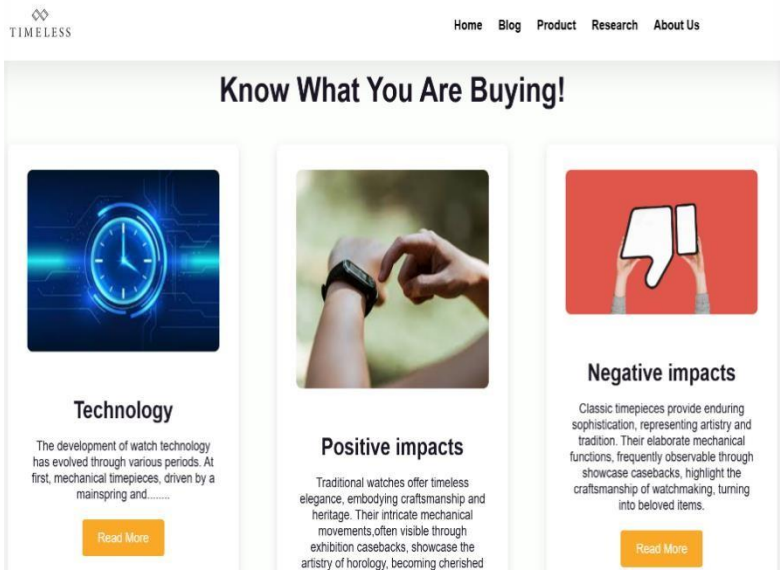

Figure 8: Blog page

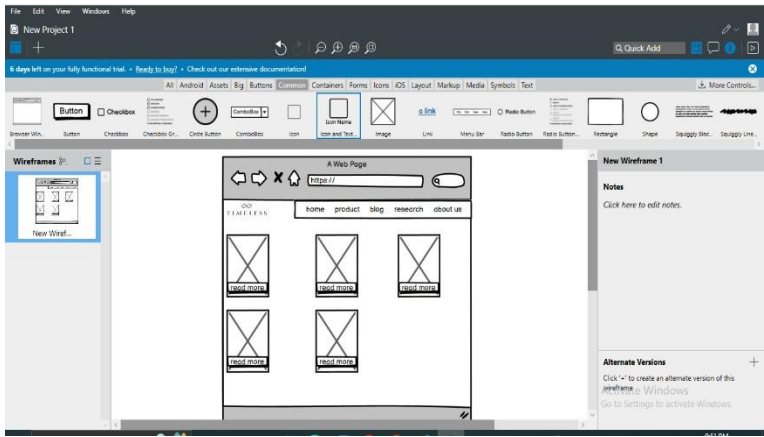

Figure 8:blog page wireframew

About us

About us page is a page that gives our description. As shown in the fig below the about us page has information about ourselves

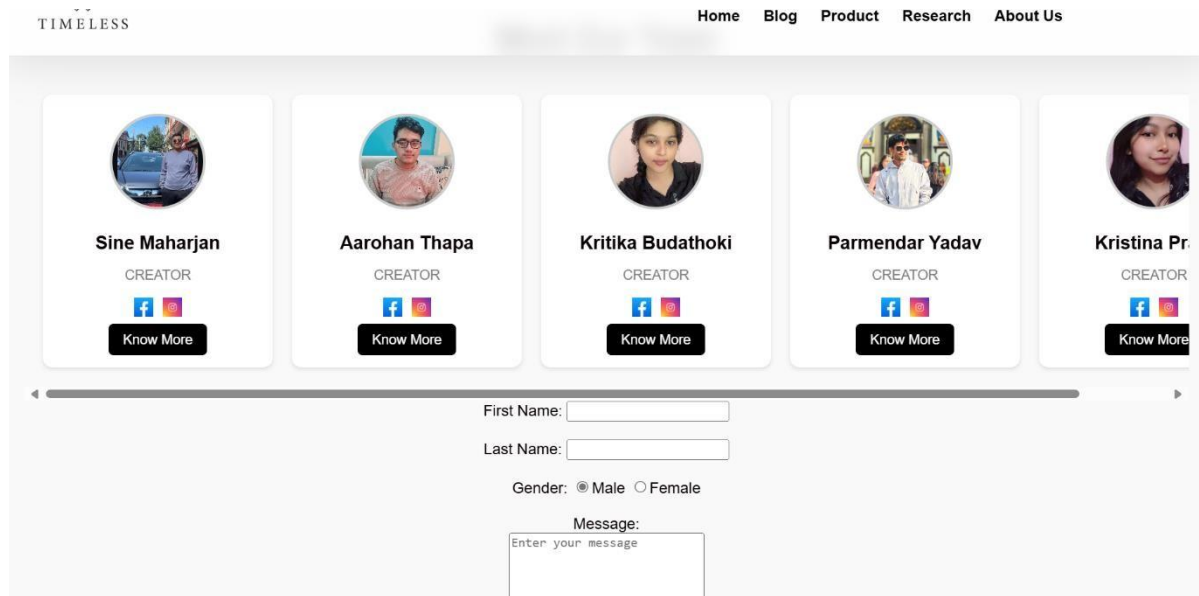

Figure 9: About Us

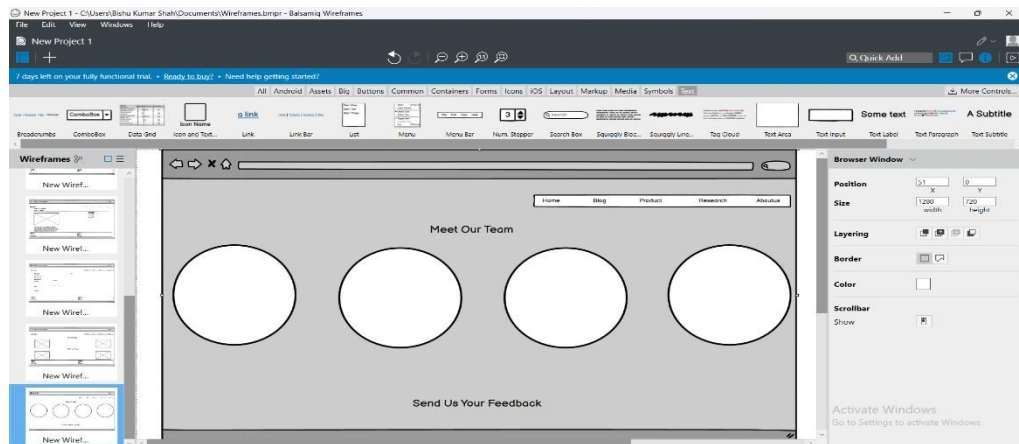

Figure 10: About us page wireframe

Research

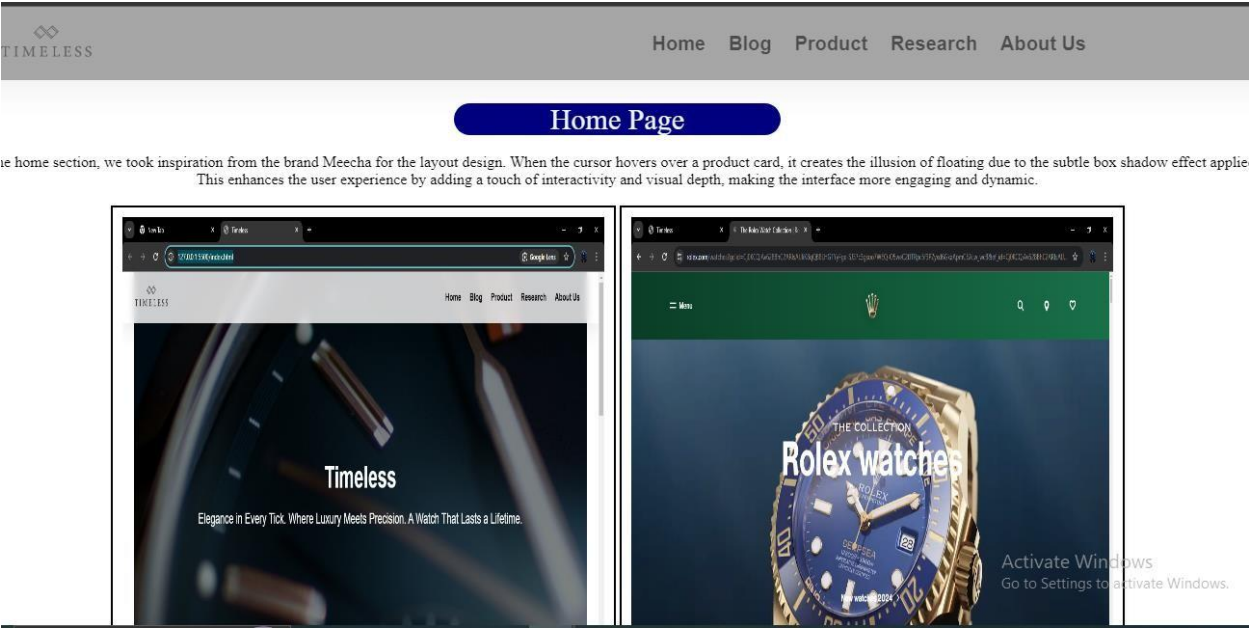

Figure 11: Research page

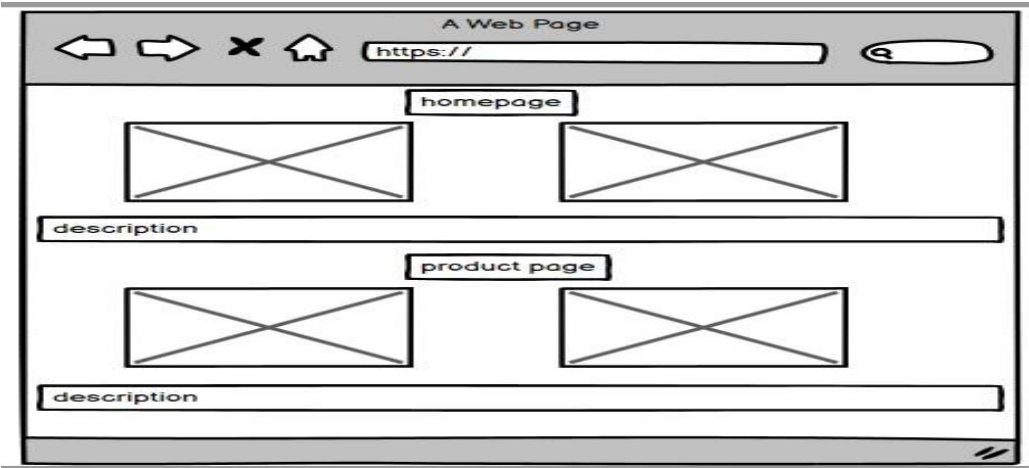

Figure 12: Wireframe of Research page

Testing

Test 1

Objective: To check if the colour of the page link changes when hovered

Action:Move the cursor over the link

Expected Result:Color of the link should change from black to yellow

Actual Result:color change from black to black to yellow

Before the test

After the test

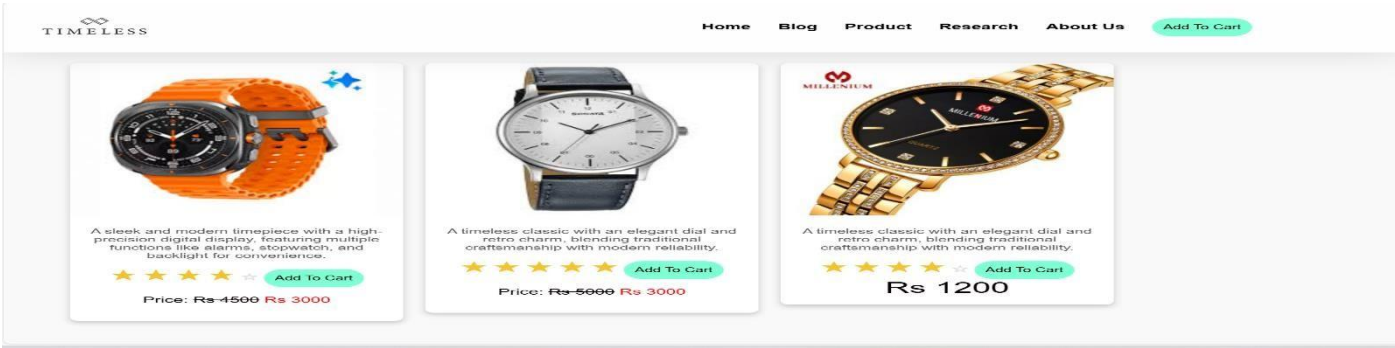

Test 2

Objective :To check if the item is added to the card

Action: click the add to card button

Expected Result: item should be added to the card

Actual Result: item is added to the card

Before the test

127.0.0.1:5500 says

Item added to cart!

OK

After the test

Test 3

Objective: to submit the review

Action: filling the review in about us page

Expected result: the review should be submitted

Actual result: review is submitted

First Name:

Last Name:

Gender: ☒ Male ☐ Female

Message:

submit

Before the review

127.0.0.1:5500 says

your review has been submitted

OK

After the review

Test 4

Objective: when we hover over the buy now color changes from yellow to black

Action: Hover the mouse over the buy now button

Expected result: the colour should change from yellow to black

Actual result: the colour changes from yellow to black

Omega

Experience the elegance of a luxurious watch with intricate craftsmanship.

[Buy Now](#)

Before the testing

Omega

Experience the elegance of a luxurious
watch with intricate craftsmanship.

Buy Now

After the testing

Test 5

Objective: to check if the image zooms or not

Action : hover over the watch image

Expected result : the image should zoom out

Actual result: image zooms out

Omega

Experience the elegance of a luxurious watch with intricate craftsmanship.

[Buy Now](#)

Before testing

Omega

Experience the elegance of a luxurious watch with intricate craftsmanship.

[Buy Now](#)

After testing

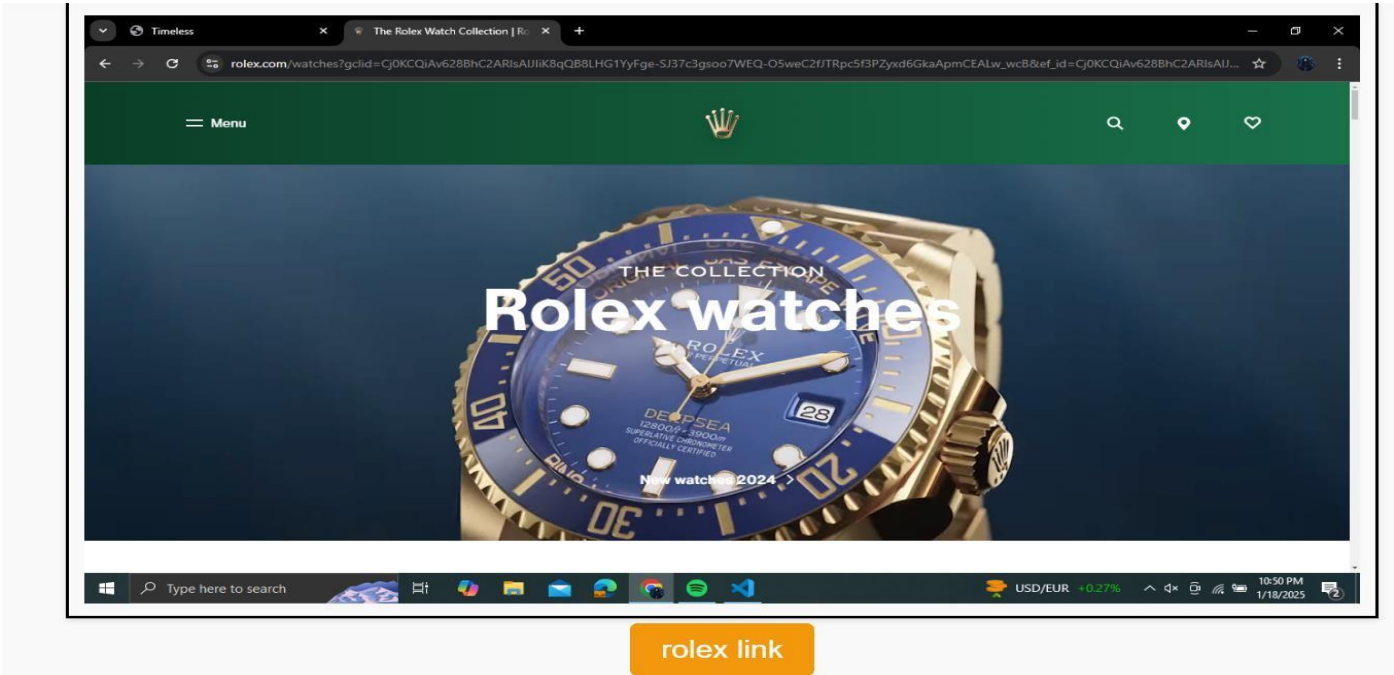

Test 6

Objective: to check external and internal link

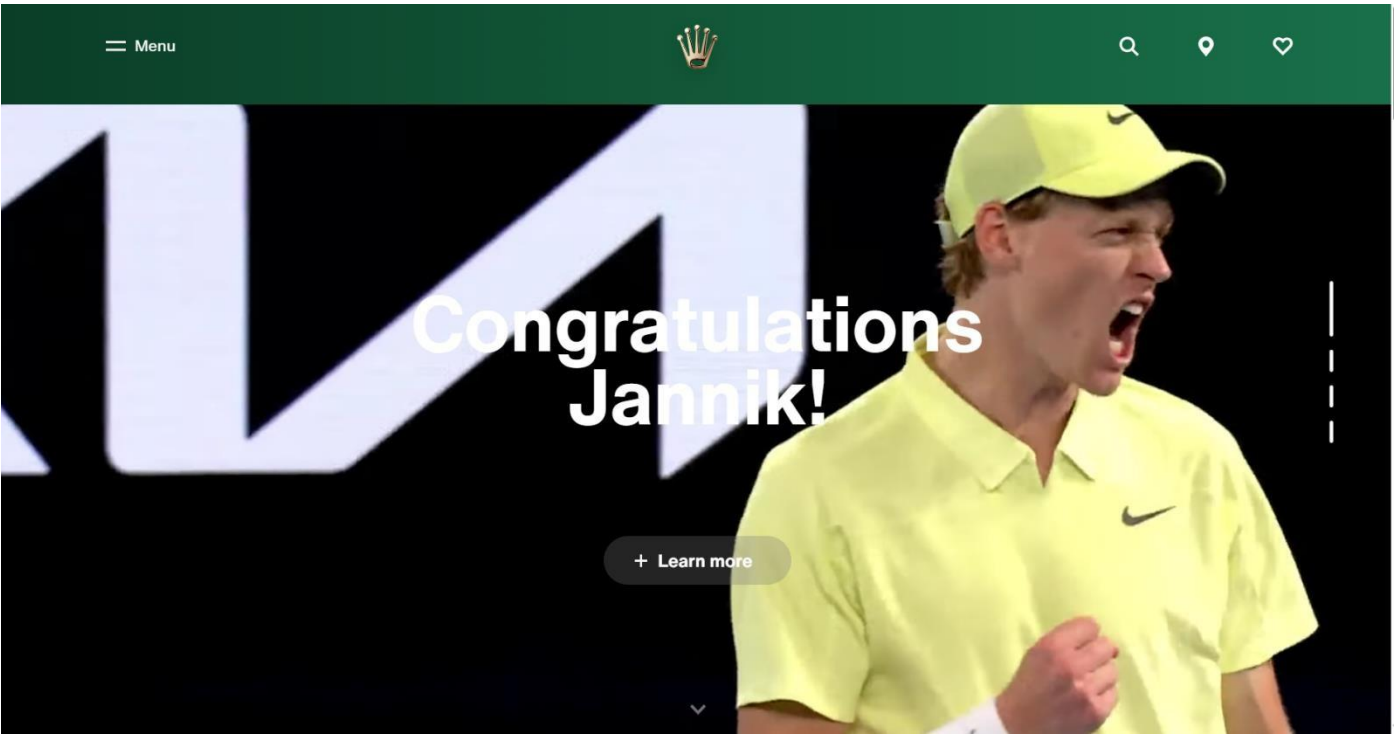

Action: click the link on the research page

Expected result : the link should direct to other website

Actual result : the link should direct to other website

Before testing

After testing

Conclusion

We would like to conclude about our journey of web development. In this course we learned about the basics of html, css and javascript to create our website. We learned team coordination and how to coordinate with each other for our work.

we used many tools like VS CODE and languages like html for the structure of our content, CSS to determine the style and layout of the content and finally we used javascript to make our content more interactive and used all three external, internal and inline css. We also used balsamiq wireframes for wireframes development

we faced many problems in the beginning. We had no coordination among each other, we had no idea where to start our project and most of us had no experience but we worked together coordinated better among ourselves, learned all the basics and finally started doing our works

There are many ways we could have done our project better like if we had the idea to start, or coordinated better among ourselves, had more time and better resources, but i think we tried our best and did whatever we could do with the given time

<div class="feature-card">

</div>

</div>

<div class="article-section">

Rolex is one of the first watch companies which has almost all the changes that has come in the watch industry

The development of watch technology has evolved through various periods. At first, mechanical timepieces, driven by a mainspring and controlled by an intricate interaction of gears, escapements, and balance wheels, signified the height of watchmaking artistry. These complex instruments, while frequently stunning, had constraints in precision when contrasted with subsequent advancements. The "quartz revolution" represented a pivotal moment, bringing in battery-operated watches utilizing vibrating quartz crystals. This innovation significantly enhanced timekeeping accuracy and rendered watches more available to the general public. Digital watches expanded on this base, adding integrated circuits for digital displays and extra features.

The contemporary period is characterized by the emergence of smartwatches. These advanced gadgets, driven by microprocessors and equipped with touchscreens, have changed the watch from just a basic timekeeping device into a small computer that is worn on the wrist. Smartwatches offer numerous functionalities, such as fitness monitoring, smartphone integration, and the capability to operate apps. This change has been propelled by progress in several areas, such as micro-engineering, materials science, and software development.

In addition to the fundamental timekeeping technologies, various other innovations have greatly influenced watch design and performance. The incorporation of highperformance materials such as stainless steel, titanium, ceramics, and sapphire

crystal has improved both the durability and visual attractiveness of timepieces. Techniques in precision manufacturing, like CNC machining and laser cutting, have allowed for the production of more complex and accurate components. The future of watch technology guarantees further advancement, with persistent research concentrating on aspects like enhanced battery life, miniaturization, and the incorporation of new technologies such as artificial intelligence and augmented reality.

<h3>Positive impacts</h3>

</div>

</div>

<div class="article-section">

<p>

Traditional watches offer timeless elegance, embodying craftsmanship and heritage. Their intricate mechanical movements, often visible through exhibition casebacks, showcase the artistry of horology, becoming cherished possessions. First, they represent enduring style, transcending fleeting trends and serving as classic accessories. Second, they offer a connection to tradition, with many mechanical watches becoming family heirlooms passed down through generations. Third, they provide a simpler, more deliberate approach to timekeeping, free from the constant barrage of notifications and digital distractions. Modern watches, particularly smartwatches, prioritize functionality and connectivity. First, they enhance productivity by providing quick access to notifications, calendars, and communication tools, streamlining daily tasks. Second, they promote health and well-being through built-in sensors that track fitness metrics, sleep patterns, and even heart rate, empowering users to make informed lifestyle choices. Third, they offer a high degree of personalization, with customizable watch faces,

interchangeable bands, and a wide range of apps to suit individual needs and preferences, making them versatile tools for modern life.

The technology within watches has had numerous positive impacts. The pursuit of accurate timekeeping has driven innovation in miniaturization, precision engineering, and materials science, leading to advancements applicable far beyond horology. Mechanical watchmaking honed skills in crafting intricate mechanisms, influencing other fields requiring delicate and precise work. The quartz revolution democratized accurate timekeeping, making it accessible to a wider population and spurring developments in microelectronics. Smartwatch technology continues to push boundaries in sensor technology, data processing, and user interface design, with applications in healthcare, fitness, and communication. Watches, therefore, have not only helped us measure time but have also served as catalysts for technological progress, improving various aspects of our lives.

<h3>Negative impacts</h3>

</div>

</div>

<div class="article-section">

<p>

</p>

<p>

 While advancements in watch technology have ushered in numerous benefits, they also present several drawbacks. The emergence of massproduced quartz watches has posed a significant threat to the survival of traditional mechanical watchmaking. The affordability and superior accuracy of

quartz movements have led to a marked decline in demand for handcrafted mechanical watches, endangering the skills and artistry of master watchmakers. Additionally, the emphasis on mass production and cost-cutting in certain segments of the traditional watch market can sometimes compromise quality and craftsmanship, undermining the heritage and artistry that once characterized the industry
.

 In the realm of modern smartwatches, the swift pace of technological innovation fosters a cycle of obsolescence, where devices rapidly become outdated and necessitate replacement, thereby contributing to e-waste and raising environmental concerns. The constant connectivity and access to information can lead to distractions, adversely affecting focus and productivity. Moreover, the vast amount of personal information collected by smartwatches raises significant concerns regarding data privacy and security. The increasing dependence on technology for even basic tasks, such as telling time, can erode our natural sense of time and spatial awareness. Lastly, the potential health implications of prolonged exposure to electromagnetic fields and the social ramifications of perpetual connectivity remain topics of ongoing debate and research.

<b>Technology has revolutionized how watches are sold, offering a multitude of tools to enhance every stage of the customer journey. Online,
```

ecommerce platforms provide a global marketplace, while virtual try-on features and AI-powered recommendations personalize the browsing experience. Digital marketing campaigns and social media engagement connect with potential customers, building brand awareness and driving traffic. Virtual showrooms and personalized communication through chatbots or email further enhance the online experience, creating a seamless and engaging path to purchase.</p>

<p>In physical stores, technology complements traditional sales methods. Interactive displays provide detailed information, while digital catalogs showcase entire collections, expanding beyond what's physically available. Sales associates can leverage tablets and CRM systems to access customer data, offering personalized recommendations and building stronger relationships. Behind the scenes, technology streamlines operations. Inventory management systems optimize stock levels, while supply chain optimization reduces costs and improves efficiency. Data analytics provides valuable insights into customer behavior and market trends, enabling businesses to make informed decisions.</p>

Ultimately, technology empowers watch sellers to create a more personalized, convenient, and engaging experience for their customers. From the initial online browsing to the in-store purchase and beyond, technology enhances every touchpoint. By leveraging these tools effectively, watch businesses can boost sales, build brand loyalty, and navigate the evolving landscape of the watch market.

Home Page

</h>

<p> In the home section, we took inspiration from the brand Rolex for the layout design. When the cursor hovers over a product card, it creates the illusion of floating due to the subtle box shadow effect applied. This enhances the user experience by adding a touch of interactivity and visual depth, making the interface more engaging and dynamic.</p></center>
